

Download Bowel Continence Nursing

Wound, ostomy, and continence nursing is a nursing specialty involved with the treatment of patients with acute and chronic wounds, patients with an ostomy (those who have had some kind of bowel or bladder diversion), and patients with incontinence conditions (those with issues of bladder control, bowel control, and associated skin care). Please send an email to education@continence.org.au if you would like to add a course to this list. Urinary and faecal incontinence affect many patients across the age span; therefore, nurses working across a diversity of practice settings require an understanding of continence management to Continence Tools for Residential Aged Care. Deakin University have completed trialling this set of standard continence screening, assessment and management tools for use by workers in residential aged care homes. Continence Tools for Residential Aged Care: An Education Guide Developed by researchers from the School of Nursing, Deakin University and funded under the National
