

# Download How Do You Make A Rainbow

How to Make a Rainbow Method 1 Refracting Light with a Prism. Get a prism. Method 2 Passing Light Through Mist. Locate a water source. Usually, rainbows are seen in the rain. Method 3 Shining Light Through Still Water. Fill a clear glass with water. Instructions: Fill the glass almost to the top with water. If you are using sunlight, place the glass so that it is half on and half off the edge of a table,... Adjust the paper and the glass until a rainbow forms on the paper. If you are using a flashlight, place the glass of water on the white ...Was thinking about the prisms we used to have in school science to make rainbows and have been thinking how do you create rainbows without the special prisms – now I know all I need is a torch and a jam jar – can't wait to try this with my 4 year old. If you have a spray bottle or hosepipe that can make a fine mist of water you can make a rainbow on a sunny day. Stand with your back to the sun and spray the hosepipe into the air. You might have to move it around to find the best angle for a rainbow.
