Do not read this if you need tips on raising a lefty; this is not a parenting book; this is a children's book. As a child, this book was awesome. The science of being left handed. When a child is in its mother's womb, by 8 weeks, they have chosen a dominant hand. By the 13th week, they are either sucking their right or their left thumbs. However, it is interesting to note that it is only by the 15th week, that the motor cortex in the brain begins sending messages to the spinal cord.
