Medical sociology is the sociological analysis of medical organizations and institutions; the production of knowledge and selection of methods, the actions and interactions of healthcare professionals, and the social or cultural (rather than clinical or bodily) effects of medical practice. Sociology is the study of society, patterns of social relationships, social interaction, and culture of everyday life. It is a social science that uses various methods of empirical investigation and critical analysis to develop a body of knowledge about social order, acceptance, and change or social evolution. We develop digital education, learning, assessment and certification solutions to help universities, businesses and individuals move between education and employment and achieve their ambitions. Talcott Parsons (December 13, 1902 – May 8, 1979) was an American sociologist who established the sociology department at Harvard University. His work was enormously influential through the 1950s and well into the 1960s, particularly in America, but fell gradually out of favor from that time on.
