

# **Download The Twelve Steps A Guide For Adults With Attention Deficit Disorder**

The classroom environment can pose challenges for a child with attention deficit hyperactivity disorder (ADHD or ADD). The very tasks these students find the most difficult—sitting still, listening quietly, concentrating—are the ones they are required to do all day long. Perhaps most frustrating ADD/ADHD occurs in an average of five to twelve percent of all children worldwide. Most recently, the CDC reported that rates of ADHD were now at 10 percent, an increase over the last few years. Intermittent explosive disorder is a psychological disorder which is characterized by repeated and sudden episodes of aggressive and violent behavior or verbal outbursts which are grossly disproportionate to the inciting situation. Codependency is a behavioral condition in a relationship where one person enables another person's addiction, poor mental health, immaturity, irresponsibility, or under-achievement. Among the core characteristics of codependency is an excessive reliance on other people for approval and a sense of identity. This condition is controversial among ...
